- Package Options Include Plastic and Ceramic DIPs
- Dependable Texas Instruments Quality and Reliability

### description

These devices contain 4-wide AND-OR expanders. In the J and N packages they perform the Boolean function X = AB + CDE + FGH + IJ when connected to X and  $\overline{X}$  inputs of SN54H50/SN74H50, SN54H53/SN74H53, or SN54H55/SN74H55. In a W package the function is Y = ABC + DE + FG + HIJ.

The SN54H62 is characterized for operation over the full military temperature range of  $-55\,^{\circ}\text{C}$  to 125  $^{\circ}\text{C}$ . The SN74H62 is characterized for operation from 0  $^{\circ}\text{C}$  to 70  $^{\circ}\text{C}$ .

TL DEVICES

NOTES: 1. Connect to  $\overline{X}$  input of 'H50, 'H53, or 'H55 circuit. 2. Connect to  $\overline{X}$  input of 'H50, 'H53, or 'H55 circuit. Resistor values shown are nominal.

# absolute maximum ratings over operating free-air temperature range (unless otherwise noted)
